SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
--	-----------	---------------

3 MONTHS

03/30/2007

PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

## Office Action Summary

Application No.

10/706,184

Applicant(s)

SAMMUT ET AL.

Examiner

Michelle (Shelley) Clement

Art Unit

3641

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 08 January 2007.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 45-83 is/are pending in the application.
- 4a) Of the above claim(s) 48,49,55-72 and 81-83 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 45-47,50-54 and 73-80 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

| 3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO/SB/08)          | 5) <input type="checkbox"/> Notice of Informal Patent Application |
| Paper No(s)/Mail Date _____  | 6) <input type="checkbox"/> Other: _____                          |

## **DETAILED ACTION**

### ***Specification***

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 75-80 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 75 recites the target acquisition device comprising a reticle comprising specific cross-hairs, it is not clear if this is the same reticle that has already been cited and claimed in claim 45 (on which 75 depends and incorporates all limitations of) or if applicant intends an additional reticle. It is noted that applicant has not disclosed a ballistics calculator system comprising two reticles. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3641

5. Claims 45-47, 50, 51, 53, and 73 are rejected under 35 U.S.C. 102(b) as being anticipated by Heidmann et al. (US Patent # 4,671,165). Heidmann et al. discloses a ballistics calculator system for computing targeting information to hit a target, comprising a processor, the processor comprising a ballistics computer program for analyzing information to accurately aim a firearm at a target using a target acquisition device with a reticle, the program using information regarding the target acquisition device and reticle being used, wherein the type of target acquisition device and reticle comprise, a reticle comprising a plurality of simultaneously visible secondary horizontal cross-hairs at predetermined distances along a simultaneously primary visible vertical cross-hair and a plurality of simultaneously visible secondary vertical cross-hairs at predetermined distances along at least some of the simultaneously visible secondary horizontal cross-hairs and an output using the visible secondary horizontal cross-hairs and visible secondary vertical cross-hairs to identify an aiming point for hitting the target. The reticle comprises a simultaneously visible primary vertical and simultaneously visible horizontal cross-hair. At least some of the visible secondary horizontal and visible vertical cross-hairs are evenly spaced and are connected to form a grid (Figure 2). Information regarding the target acquisition device and reticle being used can include the positional relationship between the target acquisition device and the firearm.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 45 and 75-80 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moore (US Patent # 4,965,439) in view of Reese (US Design Patent # Des. 306, 173). Moore discloses a ballistics calculator system for computing targeting information to hit a target, comprising a processor, the processor comprising a ballistics computer program for analyzing information to accurately aim a firearm at a target using a target acquisition device with a reticle, the program using information regarding the target acquisition device and reticle being used, wherein the type of target acquisition device comprising a housing, a means for mounting the housing in a fixed, predetermined position relative to a firearm, an objective lens mounted in one end of the housing, an ocular lens mounted in an end opposite the objective lens of the housing, a projected image. The processor is configured to display information on a display screen, the information displayed is an image of a reticle on the display screen showing a position of the aiming point. Although Moore does not expressly disclose the reticle comprising a plurality of simultaneously visible secondary horizontal cross-hairs at predetermined distances along a simultaneously primary visible vertical cross-hair and a plurality of simultaneously visible secondary vertical cross-hairs at predetermined distances along at least some of the simultaneously visible secondary horizontal cross-hairs and an output using the visible secondary horizontal cross-hairs and visible secondary vertical cross-hairs to identify an aiming point for hitting the target. The reticle comprises a simultaneously visible primary vertical and simultaneously visible horizontal cross-hair, Reese does. Reese teaches a reticle having the specified cross-hairs and secondary cross-hairs. Moore and Reese are analogous art because they are from the same field of endeavor: sighting devices. Therefor, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the reticle with the

Art Unit: 3641

specific cross-hairs as suggested by Reese with the ballistic calculator as disclosed by Moore.

The suggestion/motivation for doing so would have been to obtain an optical instrument that had an improved reticle as suggested by Reese.

8. Claims 52 and 54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heidmann et al. as applied to claim 45 above, and further in view of Wascher et al. (US Patent # 5,491,546). Although Heidmann et al. does not expressly disclose at least some of the secondary horizontal and vertical cross-hairs having identifying marks, and the reticle including range finding markings on the reticle, Wascher et al. does. Wascher et al. teaches a target acquisition device and reticle, wherein the reticle comprises primary vertical and horizontal cross-hairs that intersect at an optical center of the reticle and wherein at least some of the secondary horizontal and vertical cross-hairs have identifying marks, the reticle further including range finding marks on the reticle. Wascher et al. and Heidmann et al. are analogous art because they are from the same field of endeavor: target acquisition devices. It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the position of the reticle and identifying marks as taught by Wascher et al. with the device as disclosed by Heidmann et al.. The suggestion/motivation for doing so would have been to obtain a sighting system that included the range determining features for more accurate aiming as suggested by Wascher et al.

9. Claim 74 is rejected under 35 U.S.C. 103(a) as being unpatentable over Heidmann et al. as applied to claim 45 above, and further in view of Cohen (US Patent # 5,375,072). Although Heidmann et al. does not expressly disclose that the device comprises an elevation knob and the system providing an output of how much the knob should be turned to adjust a position of the target acquisition device relative to the firearm, Cohen does. Cohen teaches the processor and

Art Unit: 3641

the target acquisition device being separate units wherein the processor provides an output informing the user how much a windage knob must be turned to adjust a position of the target acquisition device so that an intersection of the primary vertical cross-section and the primary horizontal cross-hair can be used as the aiming point. Cohen and Heidmann et al. are analogous art because they are from the same field of endeavor: target acquisition devices. It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the separation of components as taught by Cohen with the device as disclosed by Heidmann et al., since it has been held that constructing a formerly integral structure in various elements involves only routine skill in the art and Cohen specifically teaches the components separately.

### *Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michelle (Shelley) Clement whose telephone number is 571.272.6884. The examiner can normally be reached on Monday thru Thursday 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone can be reached on 571.272.6873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
